OBJECTIVE

Final-year IT graduate with hands-on experience in Java and Spring Boot backend development, building REST APIs, data pipelines, and scalable services. Passionate about clean code, microservices, and AI-assisted development, seeking to contribute as an Associate Backend Engineer.

TECHNICAL SKILLS

Programming	Java, SQL, React.js
Web & APIs	Spring Boot, REST APIs, Swagger, Postman
Data & Database	PostgreSQL, SQL Alchemy, Excel/CSV Pipelines, Data Validation
AI / ML	Scikit-learn, TensorFlow, LSTM, NLP — model training & deployment
DevOps & Tools	Docker, Git, GitHub, Unit Testing, Debugging
Soft Skills	Problem Solving, Fast Learner, Team Collaboration, Agile Workflow

PROFESSIONAL EXPERIENCE

Software Developer Intern — **Hexaware Technologies** March 2025 – Oct 2025

Tech Stack: Java, SQL, PostgreSQL, Spring Boot, Spring JPA, React.js

Worked on an internal enterprise "ATM Tool" project used for employee data processing and reporting.

- Built RESTful APIs for employee tracking, skill updates, and bench-exit reporting, ensuring scalable backend services.
- Developed Excel ingestion pipelines handling 25K+ records with validation, duplicate detection, and error handling.
- Automated bench-exit and competency reports, reducing manual effort and speeding up decisions.
- Optimized SQL queries and workflows for improved performance in data processing.
- Performed unit and functional testing; contributed to Agile sprints, code reviews, and debugging.
- Assisted in production support, resolving backend issues and improving system stability.

PROJECTS

Workforce Competency Management System - View on GitHub

Tech Stack: Python · FastAPI · Scikit-learn · PostgreSQL · spaCy · Docker · Chart.js

- Built and deployed a **live AI-powered workforce management system** that processes employee data, classifies performance, and automates **skill-based project assignment** for active users.
- Developed robust **REST APIs** for authentication, Excel ingestion, employee management, and **ML-driven recommendations** with strong validation, error handling, and reliable structured outputs.
- Designed an interactive analytics dashboard with **search, filtering, and chart-based insights**, improving reliability through **functional testing, edge-case handling, and iterative enhancements** based on real user feedback.

5G-Ready Edge AI System for Gaming Latency Reduction – View on GitHub

Tech Stack: Python · Flask · TensorFlow · LSTM · Docker · Postman

- Built a multi-step LSTM model achieving ~89% directional accuracy in gameplay latency forecasting; benchmarked against GRU and ARIMA alternatives, selecting LSTM for 15% lower MAE.
- Deployed Flask REST APIs on an edge server for real-time ML inference at <50 ms response time; containerised the full pipeline with Docker for reproducible one-command deployment.
- Visualised latency reduction results using Matplotlib dashboards for clear non-technical stakeholder communication

EDUCATION

B.Tech in Information Technology July 2021 – May 2025

KLN College of Engineering · CGPA: 8.42 / 10

PUBLICATIONS & CERTIFICATIONS

- Published research: Analyzing Dynamic Asteroids and Hazard Visualization - National Conference
- Published research: Digital Agriculture in GenZ – National Conference.
- Awarded: Best performer in Cybersecurity – Prompt Infotech.
