boshinitp@gmail.com || 9345823379 || [GitHub](#) || [Portfolio](#) || [LinkedIn](#)

OBJECTIVE

Aspiring Software Developer with hands-on experience in Java, Spring Boot, and enterprise application development. Skilled in building scalable REST APIs, implementing clean architecture patterns, and developing data-driven systems. Passionate about solving real-world problems using cloud, AI, and modern software engineering practices.

TECHNICAL SKILLS

Programming	Java, SQL, React.js
Frameworks & APIs	Spring Boot, Spring JPA, REST APIs, Microservices, Swagger, Postman, Groq LLM
Data & Database	PostgreSQL, Excel/CSV Pipelines, Data Validation, Batch Processing
Tools & Concepts	GitHub, Git, SDLC, OOPs, Data Structures and Algorithms, OS, JUnit, Agile
Soft Skills	Problem Solving, Fast Learner, Team Collaboration, Agile Workflow

PROFESSIONAL EXPERIENCE

Software Developer Intern — Hexaware Technologies

March 2025 – Oct 2025
Chennai, India

Tech Stack: Java, SQL, PostgreSQL, Spring Boot, Spring JPA, React.js, NLP

- Designed and developed enterprise-grade RESTful APIs using Java and Spring Boot, applying Dependency Injection (IoC) and layered architecture for scalable application design. Built high-throughput Excel ingestion pipelines processing 25K+ records with automated validation, duplicate detection, and error handling, cutting manual data entry by ~70%.
- Automated bench-exit and competency reporting workflows, reducing decision turnaround time and freeing team leads from manual tracking.
- Optimized complex SQL queries and stored procedures, improving data processing speed and system responsiveness.
- Developed unit and integration tests using JUnit and Mockito, following Test-Driven Development (TDD) practices.
- Participated actively in Agile sprints, code reviews, and production support.

PROJECTS

Intelligence Incident Monitoring System - [View on GitHub](#)

Tech Stack: Java 21, Spring Boot, JWT Authentication, Apache Kafka, Redis, PostgreSQL, Docker, Maven, Swagger, JPA.

- Developed a Smart Incident Monitoring System using Java, Spring Boot, Kafka, Redis, and PostgreSQL to process and analyze 10,000+ simulated application logs with real-time incident detection and alert generation.
- Implemented Kafka-driven asynchronous event processing and Redis-based spike detection mechanisms, enabling automated identification of recurring application failures and improving incident response efficiency by 70%.
- Designed and secured RESTful APIs with JWT authentication and role-based authorization to support log ingestion, analytics reporting, incident grouping, and alert management functionalities.
- Containerized the application using Docker and integrated Swagger API documentation, caching strategies, and automated incident classification workflows, improving backend response performance by nearly 40%.

Personal Expense Tracker – [View on GitHub](#)

Tech Stack: Java, Spring Boot, PostgreSQL, React.js, JPA, Chart.js, Maven

- Developed a full-stack financial management application with CRUD operations, multi-filter reporting, and interactive Chart.js dashboards for income/expense analytics.
- Implemented comprehensive test coverage using JUnit, Mockito, and MockMvc, ensuring high reliability and regression safety.
- Developed RESTful APIs with transaction management and data integrity handling using Spring Boot and JPA/Hibernate.

EDUCATION

B.Tech in Information Technology

July 2021 – May 2025

KLN College of Engineering · CGPA: 8.42 / 10

PUBLICATIONS & CERTIFICATIONS

- Published research: Analyzing Dynamic Asteroids and Hazard Visualization - National Conference
- Awarded: Best performer in Cybersecurity - Prompt Infotech.
